

NR 283 Week 1 Hippocampus Workout

Define the following terms:

	<u>Term</u>	<u>Definition</u>
1	Pathophysiology	
2	Homeostasis	
3	Risk factor	
4	Etiology	
5	Idiopathic	
6	Acute	
7	Chronic	
8	Manifestation	
9	Sign	
1 0	Symptom	
1 1	Complication	
1 2	Exacerbation	
1 3	Prognosis	
1 4	Iatrogenic	
1 5	Gene	
1 6	Genomics	
1 7	Autosomal	
1 8	Genetics	
1	Phenotype	

9		
2 0	Genotype	
2 1	Allele	
2 2	Mutation	
2 3	Trisomy	
2 4	Karyotype	
2 5	Autosomes	
2 6	Nondisjunction	
2 7	Translocation	
2 8	Mosaicism	
2 9	Atrophy	
3 0	Hypertrophy	
3 1	Hyperplasia	
3 2	Metaplasia	
3 3	Dysplasia	
3 4	Anaplasia	
3	Neoplasia	

5		
3 6	Apoptosis	
3 7	Necrosis	
3 8	Gangrene	
3 9	Ischemia	
4 0	Hypoxia	
4 1	Hypoxemia	
4 2	Infarction	

What are the FOUR main components we have to know when studying pathophysiology components.

- 1.
- 2.
- 3.
- 4.

How do we prioritize our patient's clinical manifestations? What are some examples of symptoms and signs we would see in each?

A

B

C

Draw a Punnett Square for an autosomal recessive disorder. List examples of autosomal recessive disorders.

How many copies of the mutated gene need to be inherited for recessive disorders?
