Case Findings

Leukopenia
Anemia
Thrombocytopenia
Febrile
Redness at PICC

Stop light question:

You are the nurse caring for emily & camila. After reviewing the EHR for both, list significant findings for each client that impacts your decision making prioritization.

Camila is experiencing exacerbation of MS, which is more of a chronic condition whereas Emily is febrile and has symptoms of infection making her condition more acute. I believe Emily is the priority patient in the scenario.

Discussion

Emily Laskey		Camila Soto	
(Admit Dx: Fever, Rule out Central Line infection)		(Admit Dx: Exacerbation of MS)	
Vital Signs	EHR Assessment	Vital Signs	EHR Assessment
BP: 106/68 P: 98 RR: 20 Temp: 101.8° F O2: 98% on room air Pain: 0/10	Emily Laskey is a 48-year-old female with a history of breast cancer. History of breast cancer. She had a self-detected mass three months ago and subsequent lumpectomy and biopsy about two weeks later, which showed HER2+ intraductal breast CA <ul style="list-style-type: none"> • Direct admit to hospital oncology floor • Receives outpatient chemotherapy with cyclophosphamide, docetaxel, doxorubicin, and trastuzumab • Fever detected at chemotherapy clinic today • Redness around her PICC line. • Lab results: WBC-1,500 mm³, RBC-3.1million/nl, Hgb-8g/dl, Hct-28%. 	BP: 120/68 P: 88 RR: 20 Temp: 99.6°F O2: 96% on RA Pain: 0/10	Camila Soto is a 35-year-old female who presented to her HCP's urgent care this morning with increased weakness and vision changes for the past week. <ul style="list-style-type: none"> • Direct admit to the med-surg unit. • History of multiple sclerosis, which was diagnosed five years ago. • Neurogenic bladder X3 years • Urinary tract infection three months ago • Urosepsis one year ago. • Home Medications: <ul style="list-style-type: none"> ◦ Baclofen 40 mg PO BID. ◦ Gabapentin 100 mg PO TID. ◦ Jolessa BCP active pills one per day PO for 84 days, then one week of inactive pills. ◦ MiraLAX one scoop per label instructions per day. ◦ Ocrelizumab, 500 mg IV, every six months, last dose two months ago. • CBC: WBC-11,00mm³, • Urinalysis: Cloudy, odor, Leukocyte esterase-positive, bacteria-positive, Blood-negative. Interpretation: Pyuria and bacteriuria noted.
