Urinary Tract Infections

Severity of Urinary Tract Infection

For each description of a urinary tract infection (UTI), click to specify if the factor is more likely associated with a complicated or uncomplicated UTI.

	Complicated UTI	Uncomplicated UTI
Occurs in a normal urinary tract	<input type="radio"/>	<input checked="" type="radio"/>
Caused by untreated cystitis	<input checked="" type="radio"/>	<input type="radio"/>
Responds well to oral antibiotics	<input type="radio"/>	<input checked="" type="radio"/>
Occurs in an immunocompromised individual	<input checked="" type="radio"/>	<input type="radio"/>
Infection beyond the bladder	<input checked="" type="radio"/>	<input type="radio"/>
Associated with indwelling urinary catheters	<input checked="" type="radio"/>	<input type="radio"/>

Upper Urinary Tract Infections

Which of the following are upper urinary tract infections (UTIs)? Select all that apply.

Prostatitis

Urethritis

Cystitis

Pyelonephritis

Ureter infection

Upper UTIs occur in organs that are above the urinary bladder and include ureter infections and pyelonephritis (kidney infection).

Cystitis (bladder infection), urethritis (infection of the urethra), and prostatitis (infection of the prostate) occur in the lower urinary tract.
