Correct!

Question 1	1 / 1 pts
CO1 A rash that looks like the patient was slapped on the cheeks of the face is the hallmark characteristic for which disease?	
<hr/>	
<input checked="" type="radio"/> erythema infectiosum	
<hr/>	
<input type="radio"/> Rocky Mountain spotted fever	
<hr/>	
<input type="radio"/> rubeola	
<hr/>	
<input type="radio"/> rubella	

Question 2	1 / 1 pts
<hr/>	
<hr/>	

CO4 A 4-year-old presents to the clinic with his mother complaining of an itchy rash, mostly between his fingers. The rash has been present for days and has been getting worse. The patient recently started at a new day care. On physical exam, the patient is afebrile and has multiple small (1-2 mm) red papules in sets of 3 located in the web spaces between his fingers. He also has signs of excoriation. What is the treatment for this problem?

Correct!

- Permethrin lotion for the patient and family members
- cold compresses and hydrocortisone cream 1% twice a day
- over-the-counter Benadryl cream
- ketoconazole cream

Question 3

1 / 1 pts

CO1 A 25-year-old male presents to urgent care complaining of genital pruritus. On physical exam, the patient has small, erythematous, excoriated papules in his pubic hair. No mites are identified. There is no penile discharge, and the patient has no constitutional symptoms. He is sexually active but wears condoms

Correct!

- pediculosis
- scabies
- gonorrhea
- chlamydia
