Question 1

1 / 1 pts

stant itching. He has no fever or constitutional symptoms. The patient has a sibling that just started day care recently. Up

Correct Answer

- viral conjunctivitis
- bacterial conjunctivitis
- allergic conjunctivitis
- blepharitis

Question 2

1 / 1 pts

CO6 A 64-year-old has had a corneal infection for several weeks. He asks why the infection is still present. How do you respond?

- We can't determine the causative agent.
- Systemic antibiotics have difficulty getting to that area of the eye.
- Because the infection was painless, it was not treated early enough.

Correct!

Because the cornea doesn't have a blood supply, an infection can be fought off as usual.

Question 3

1 / 1 pts

CO1 A 47-year-old presents to the clinic with a red eye. How would the NP differentiate between iritis and conjunctivitis?

- ciliary flush
- eye discomfort
- slow progression
- no change in vision

Correct!
