

NR 511 Quiz Week 3

1. **A patient has been treated for glaucoma for five (5) years. Which of the following will provide an indication of the level of progression during the fundoscopic examination for this patient?**

A extraocular movements

B verifying a red reflex

C estimating cup-to-disk ratio

D checking the macula

2. **A 46-year-old is diagnosed with viral conjunctivitis. What treatment should be included?**

A ciprofloxacin ophthalmic drops

B gentamicin ophthalmic ointment

C supportive measures and lubricant eye drops

D oral erythromycin × 14 days

3. **A 10-year-old presents to the office with his mother with complaints of itchy and red eyes for 1 day. He reports watery drainage in both eyes associated with constant rubbing. He has no fever or constitutional symptoms. The patient has a sibling that just started daycare recently. Upon examination vision is 20/20 OU with glasses. He has mild to moderate conjunctival hyperemia with bilateral preauricular lymph nodes that are inflamed. What is the most likely diagnosis?**

A bacterial conjunctivitis

B allergic conjunctivitis
