

**Executive Summary**

Chamberlain University

NR 531: Nursing Leadership in Healthcare Organizations

Dr. Carter

Year 2026

## **Executive Summary**

The purpose of this assignment is to effectively and concisely provide an executive summary of a more detailed report. An executive summary is a very general report outlining the main information provided from a longer, more detailed report, breaking down information for key stakeholders. This executive report will consist of general background, key data findings, analysis of the findings, and recommendations moving forward.

### **Purpose**

This is an executive summary of a recent report pertaining to Spring View Hospital's application for Magnet Status from the American Nurses Credentialing Center (ANCC). The ANCC recently held an accreditation visit, which showed a deficiency. The deficiency was found in the Empirical Quality Results, specifically Quality of Care. The ANCC will be at Spring View Hospital in six months for a follow-up accreditation visit. Finding and executing resolutions to show improvement in the Quality of Care is necessary in order to obtain Magnet Status. The following report will explain the deficiency, the impact it has on patients and staff, and the recommendations for resolving the deficiency.

### **Background**

My name is Brittany Reed, the Chief Quality and Safety Officer at Spring View Hospital. My intent and job role at this facility is to create and ensure a safe and high-quality environment for everyone who enters the building, whether it is a patient, staff, or visitor. After the recent ANCC accreditation visit, a deficiency was found in the Empirical Quality Results. The Magnet Model Component is Quality of Care. The quality of care is how well a health organization is able to achieve the desired health outcomes of individuals and communities. (WHO, 2023).
