Problem Statement by [REDACTED] on case Maddison Patton

M.P. is a pleasant 24-year-old female referred by her primary care provider following an 8-day episode of euphoric mood, decreased need for sleep, pressured speech, and impulsive, goal-directed behavior, which resolved two weeks ago. She denies current or past hallucinations, substance use, self-harm, paranoia, or suicidal or homicidal ideation. Vital signs are stable, and physical examination is unremarkable. Mental status examination reveals a depressed mood and congruent affect. Review of prior medical records and laboratory results shows no evidence of underlying medical or substance-related causes. Findings are consistent with a possible mood disorder, and further psychiatric evaluation is warranted.
